PROFILE

Software Engineer with 3+ years of professional experience building cloud-native, full-stack systems and shipping production software. Founder in the hospitality technology domain, applying engineering expertise to develop and operate real-world web and mobile applications. Currently pursuing a Masters degree specialising in Artificial Intelligence, Machine Learning, and Cloud Technologies.

EDUCATION

Master of Science - Computer Science, Pace University

Sep 2025 – May 2027 | New York, NY, U.S.A.

Bachelor of Technology - Computer Science, Dr. Babasaheb Technological University

Aug 2017 – May 2021 | Pune, MH, India

PROFESSIONAL EXPERIENCE

Founder & Software Engineer, Cafe Caffea (Hospitality Technology Venture)

May 2024 – Present | Nanded, MH, India

- Founded and scaled a hospitality venture, owning business strategy, product vision, and operations, while leading vendor negotiations, inventory planning, budgeting, and a 6-member team, improving profit margins by 15 percent and increasing customer satisfaction by 20 percent.
- Designed and built production-grade products including Khamang (mobile food marketplace), Cafe Caffea (restaurant web platform), FoodyGuru (AI-powered recipe system), and GestureGrade (real-time gesture recognition), translating real operational needs into scalable digital solutions.
- Delivered digital-first customer experiences such as online reservations, meal pre-booking, real-time menu updates, AI-assisted workflows, and gesture-driven customer feedback, reducing wait times by 25 percent and improving order efficiency by 30 percent.

Project Engineer, WIPRO Limited

Aug 2021 – Jan 2024 | Pune, MH, India

- Optimised digital loan processing systems for a major U.S. bank, reducing approval time from 7–10 days to 4–5 days, with qualified users receiving loans within a 1-day SLA.
- Improved responsive web design and document upload workflows, increasing form completion rates by 25 percent and boosting customer engagement by 22 percent across mobile, tablet, and desktop platforms.
- Designed and implemented scalable, high-performance front-end components using React.js, Angular, HTML5, and CSS3, ensuring maintainable code and consistent UI behaviour across platforms.
- Collaborated with cross-functional engineering, product, and design teams using Postman, Jira, and Figma to test APIs, refine UX, and deliver 3 major sprint releases on schedule.

SKILLS

- **Languages** - Java, Python, C, C++, C#, JavaScript, TypeScript, SQL, Go, Rust, Kotlin, R, Bash.ddddd
- **Frameworks & Libraries** - Spring Boot, Hibernate, JPA, React.js, Angular, Node.js, Express.js, REST APIs, Flask, TensorFlow, Pandas, NumPy.
- **Cloud & DevOps** - AWS (ECS, EKS, Beanstalk, S3, Lambda, EC2, RDS, CloudWatch, VPC), Docker, Jenkins, Maven, Terraform, Docker Compose.
- **Databases** - MySQL, PostgreSQL, MongoDB, Redis, SQLite, Elasticsearch, DynamoDB, Cassandra.
- **Software** - Visual Studio, Postman, Swagger UI OpenAPI, GitHub, GitLab, Jira, Confluence, Slack, Kubernetes Dashboard.

PROJECTS

Khamang Mobile App 

- Architected, developed, and published a production-grade Android mobile marketplace on the Google Play Store, built with React Native, Redux, Node.js, Express, and MongoDB, implementing 30+ REST APIs, secure bcrypt authentication, Razorpay payments, and generating a signed 48.2 MB Android App Bundle (AAB).
- Enabled home-based food makers to manage 100+ menu items, process real-time orders, and monitor revenue analytics, while allowing customers to discover nearby makers, complete checkout in <2 seconds, receive live order status updates via 5-second polling, and reorder from history, directly supporting local commerce at scale.

Cafe Caffea 

- Designed and deployed a full-stack restaurant management platform delivering sub-second real-time order processing, improving menu and table workflows by 40 percent, and supporting 10K+ monthly transactions through a scalable production setup.
- Built an admin dashboard with live order tracking for 50+ concurrent sessions, automated billing and item management, and secure role-based authentication, reducing manual café operations by 60 percent and improving UI performance by 35 percent.

FoodyGuru 

- Engineered a full-stack AI web application using Next.js 15, React 19, TypeScript, and FastAPI, designing a stateless LLM orchestration layer that assembles structured prompts, enforces response schemas, and manages multi-step generation flows, achieving a 17.6 kB main bundle and 90+ Lighthouse score.
- Delivered a low-latency user experience by optimising request pipelines, maintaining conversation state server-side, and exposing scalable REST endpoints for recipe generation, chat assistance, and favourites, resulting in sub-second API responses, <200 kB first-load JS, and production-ready deployment.

GestureGrade 

- Developed an on-device computer vision inference pipeline using MediaPipe Vision that extracts 42 hand and 478 facial landmarks per frame, engineers geometric features (angles, distances, curvature, temporal deltas), and performs multi-class gesture and ASL classification via deterministic classifiers with temporal smoothing for stability.
- Optimised real-time inference to achieve 33–60 FPS, <100 ms end-to-end latency, and 85–95 percent accuracy on CPU-only hardware by reducing feature dimensionality, applying confidence thresholding, and adaptive frame skipping, delivering privacy-preserving, zero-server ML inference at scale.

CERTIFICATES

Azure Fundamentals (AZ-900): Foundational knowledge of cloud computing models and core Azure services (compute, networking, storage).
