PROFILE

Software Engineer with more than 3 years of experience building cloud native full stack systems and shipping production ready applications. Founder in the hospitality technology domain with hands on experience developing and operating real world web and mobile platforms. Currently pursuing a Master's degree specialising in artificial intelligence, machine learning, and cloud technologies and seeking software engineering internship roles.

EDUCATION

Master of Science - Computer Science, Pace University Sep 2025 – May 2027 | New York, NY, U.S.A.
Bachelor of Technology - Computer Science, Dr. Babasaheb Technological University Aug 2017 – May 2021 | Pune, MH, India

PROFESSIONAL EXPERIENCE

Founder & Software Engineer, Cafe Caffea (Hospitality Technology Venture) May 2024 – Aug 2025 | Nanded, MH, India

- Founded and scaled a hospitality technology venture while leading product development, engineering direction, and end to end operations, improving profit margins by 15% and increasing customer satisfaction by 20%.
- Designed and built production grade systems including Khamang (mobile food marketplace), Cafe Caffea (restaurant web platform), FoodyGuru (AI powered recipe engine), and GestureGrade (real time gesture recognition system), delivering scalable and operationally reliable digital products.
- Developed digital first customer experiences such as online reservations, meal pre booking, real time menu updates, AI assisted workflows, and gesture driven feedback systems, reducing wait times by twenty five per cent and improving order efficiency by 30%.

Project Engineer, WIPRO Limited Aug 2021 – Jan 2024 | Pune, MH, India

- Optimised digital loan processing systems for a major United States bank, reducing approval time from 7 to 10 days down to 4 to 5 days, with qualified users receiving loans within a one day service level agreement.
- Improved responsive web design and document upload workflows, increasing form completion rates by 25% and boosting customer engagement by 22% across mobile, tablet, and desktop platforms.
- Designed and implemented scalable high performance front end components using React.js, Angular, HTML5, and CSS3, ensuring maintainable code and consistent user interface behaviour across devices.
- Collaborated with engineering, product, and design teams to test APIs using Postman, refine user experience in Figma, and deliver 3 major sprint releases on schedule.

SKILLS

- **Languages** - Java, Python, C, C++, C#, JavaScript, TypeScript, SQL, Go.
- **Frameworks & Libraries** - Spring Boot, Hibernate, JPA, React.js, Angular, Node.js, Express.js, REST APIs, Flask, Pandas, NumPy.
- **Cloud & DevOps** - AWS, Docker, Jenkins, Maven, Docker Compose.
- **Databases** - MySQL, PostgreSQL, MongoDB, Redis, SQLite, DynamoDB.

CERTIFICATES

Azure Fundamentals (AZ-900): Foundational knowledge of cloud computing models and core Azure services (compute, networking, storage).

PROJECTS

Khamang Mobile App [🔗](#)

- Architected, developed, and published a production grade Android mobile marketplace on the Google Play Store using React Native, Redux, Node.js, Express, and MongoDB by implementing more than 30 REST APIs, secure bcrypt authentication, and Razorpay payments, and generating a signed 48 megabyte Android App Bundle.
- Enabled home based food makers to manage more than 100 menu items, process real time orders, and monitor revenue analytics, while allowing customers to discover nearby makers, complete checkout in less than 2 seconds, receive live order status updates through five second polling, and reorder from history, supporting local commerce at scale.

Cafe Caffea [🔗](#)

- Designed and deployed a full stack restaurant management platform supporting real time order processing with under 1 second latency, improving menu and table workflows by 40% and handling more than ten thousand monthly transactions in a scalable production environment.
- Built an administrative dashboard with live order tracking supporting more than 50 concurrent sessions, automated billing and item management, and secure role based authentication, reducing manual cafe operations by 60% and improving user interface performance by 35%.

FoodyGuru [🔗](#)

- Engineered a full stack AI web application using Next.js fifteen, React nineteen, TypeScript, and FastAPI by designing a stateless large language model orchestration layer that assembles structured prompts, enforces response schemas, and manages multi step generation flows, achieving a 18 kilobyte main bundle and more than 90 Lighthouse score.
- Delivered a low latency user experience by optimising request pipelines, maintaining conversation state on the server, and exposing scalable REST endpoints for recipe generation, chat assistance, and favourites, resulting in under 1 second API responses, less than 200 kilobyte first load JavaScript, and production ready deployment.

GestureGrade [🔗](#)

- Developed an on device computer vision inference pipeline using MediaPipe Vision that extracts 42 hand landmarks and 478 facial landmarks per frame, engineers geometric features including angles, distances, curvature, and temporal deltas, and performs multi class gesture and American Sign Language classification through deterministic classifiers with temporal smoothing for stability.
- Optimised real time inference to achieve 33 to 60 frames per second, less than 100 ms end to end latency, and 85% to 95% accuracy on CPU only hardware by reducing feature dimensionality, applying confidence thresholding, and using adaptive frame skipping, delivering privacy preserving large language model inference with 0 server dependency.
